

When sending your cams for reslinging we ask that you carefully fill out the Cam Document page. This will assist us in giving you the best service we possibly can. It is important that you list your cams, type and size along with your choice of webbing and color for each cam. We also ask that you label each cam **separately** for the color sling you want, masking tape works well. Please do not cover holes in stem with masking tape. We will make every attempt to match your color choice, but there will always be variations in colors and patterns. Please be sure to include a phone number that you can be reached during the day, as well as an email address if available. We also ask that you do not bundle cams with 1 tag for all, when we cut the bundle apart it increases the chance of an error. Working together, we can resling your cams to your specs and get them back to you as quickly as possible.

**Slings for your cams are available in these types and colors**

**14mm Spectra**
